Professional Summary

Senior Platform Engineer specializing in enterprise cloud enablement, internal developer platforms, and infrastructure automation. Experienced operating large-scale cloud platforms supporting hundreds of developers, hundreds of AWS accounts, and thousands of Terraform workspaces. Skilled in Terraform Enterprise, Amazon EKS, AWS architecture, CI/CD automation, and building self-service platforms that enable engineering teams to deliver applications securely and efficiently.

Core Competencies

Cloud Platforms & Architecture

- ▶ AWS (EKS, EC2, Lambda, API Gateway, ECS/Fargate, Elastic Beanstalk)
- ▶ Azure Identity Services and JWT Authentication
- ▶ Multi-account AWS environments
- ▶ Cloud architecture and platform engineering

Infrastructure as Code & Automation

- ▶ Terraform Enterprise
- ▶ Terraform Modules
- ▶ Infrastructure as Code (IaC)
- ▶ Python Automation
- ▶ Bash / PowerShell
- ▶ GitHub Actions

Platform Engineering & Kubernetes

- ▶ Amazon EKS
- ▶ Kubernetes Administration
- ▶ Helm Deployments
- ▶ Internal Developer Platforms
- ▶ Developer Self-Service Enablement

CI/CD & Security

- ▶ Jenkins
- ▶ Groovy Pipeline Development
- ▶ Bitbucket Integration
- ▶ GitHub Actions
- ▶ AWS IAM

Senior Platform Engineer

November 2025 - Present

Enterprise Mobility

- ▶ Design, operate, and enhance an enterprise internal developer platform enabling dozens of application teams and hundreds of developers to provision and deploy cloud workloads through standardized automation patterns.
- ▶ Own and manage the **Terraform Enterprise platform deployed on Amazon EKS**, supporting thousands of Terraform workspaces across hundreds of AWS accounts while maintaining platform reliability, scalability, and operational efficiency.
- ▶ Architect and establish enterprise-grade Terraform modules, defining self-service IaC standards that enable hundreds of developers to deploy standardized AWS infrastructure safely.
- ▶ Participate in on-call rotation and incident response activities, troubleshooting production platform issues, coordinating resolution efforts, and implementing improvements to increase reliability and reduce recurring incidents.
- ▶ Drive technical troubleshooting and root-cause resolution during enterprise incident response calls, investigating complex platform failures and implementing critical fixes across high-scale production environments.
- ▶ Manage Kubernetes-based platform operations including EKS administration, Helm deployments, upgrades, troubleshooting, and production support.
- ▶ Serve as a technical point of contact with vendors including AWS and HashiCorp, leading issue resolution, platform improvements, and solution discussions to align cloud capabilities with enterprise business needs.
- ▶ Build and maintain hundreds of **Jenkins CI/CD pipelines using Groovy** to automate application build and release workflows from Bitbucket repositories.
- ▶ Maintain and enhance internal Python-based automation applications supporting enterprise image creation, application patching, and technical demonstrations.
- ▶ Improve internal automation platforms through application enhancements, reliability improvements, and operational troubleshooting.
- ▶ Lead and mentor cross-functional engineers on AWS architecture, Python automation standards, and unit testing practices, elevating internal team capabilities and accelerating cloud adoption across the organization.
- ▶ Partner with application engineering teams to onboard workloads, resolve deployment challenges, and improve cloud delivery practices.

Senior Cloud Solutions Engineer

May 2023 - November 2025

Bayer Corporation

- ▶ Designed and implemented AWS cloud automation solutions using Terraform, serverless technologies, and CI/CD workflows.

- ▶ Developed reusable Terraform infrastructure templates supporting AWS resources, networking components, and enterprise application deployments.
- ▶ Built secure API Gateway integrations using Lambda-based Azure JWT authorization.
- ▶ Developed SageMaker inference solutions supporting scalable machine learning workloads.
- ▶ Created event-driven AWS architectures using Lambda and EventBridge to automate operational workflows.
- ▶ Built containerized FastAPI applications deployed using AWS ECS/Fargate.
- ▶ Implemented GitHub Actions automation to improve deployment consistency and reduce manual processes.

Application Support Specialist

December 2021 - December 2022

Salesforce

- ▶ Managed backend operations for AI-driven applications, troubleshooting data flows and generating comprehensive performance reports
- ▶ Led cross-functional incident investigations, collaborating with development teams to resolve critical platform issues
- ▶ Monitored and reported on new platform deployments, ensuring stability and performance benchmarks

QA Tester

March 2020 - November 2021

HP Inc.

- ▶ Tested software releases ensuring integration and functionality across all system components
- ▶ Documented and tracked bugs using Jira, collaborating with development teams to identify and verify resolutions
- ▶ Conducted competitive analysis of similar software products to identify strengths and improvement opportunities
- ▶ Designed and implemented new testing environments and test cases in collaboration with QA team
- ▶ Verified bug fixes and worked closely with developers to clarify requirements and testing scenarios

IT Systems Technician

April 2019 - March 2020

C-P-U (Managed Service Provider)

- ▶ Designed and maintained enterprise network infrastructures including Exchange, DHCP, DNS, and RDS servers
- ▶ Implemented Office 365/Exchange Online environments, managing user licensing and troubleshooting integration issues
- ▶ Administered Microsoft Active Directory environments across multiple client organizations

- ▶ Provided remote and on-site technical support for network and system issues

Education & Certifications

Bachelor of Science in Computer Networking & Telecommunications

Southeast Missouri State University

May 2015 - May 2019

AWS Certified Solutions Architect Associate

AWS SAA

February 2023

Expertise in designing distributed systems on AWS with focus on scalability, security, and cost optimization

Key Technical Projects

- ▶ **Enterprise Terraform Platform:** Managed Terraform Enterprise running on Amazon EKS as a shared internal developer platform supporting thousands of Terraform workspaces across hundreds of AWS accounts.
- ▶ **Developer Self-Service Platform:** Created reusable Terraform modules and automation workflows enabling application teams to provision standardized cloud infrastructure without direct platform intervention.
- ▶ **CI/CD Platform Automation:** Developed and maintained hundreds of Jenkins pipelines using Groovy to automate application build and release processes.
- ▶ **Cloud Automation Applications:** Maintained Python-based automation platforms supporting image creation, application patching, and enterprise demonstrations.
- ▶ **AWS Serverless Architecture:** Designed Lambda and API Gateway solutions with secure JWT-based authentication and Terraform-managed infrastructure.
